

Late Miocene polycystine radiolarians of the Japan Sea (IODP Exp. 346 Site U1425)

Kenji M. Matsuzaki^{1,*} and Takuya Itaki²

Kenji M. Matsuzaki and Takuya Itaki (2019) Late Miocene polycystine radiolarians of the Japan Sea (IODP Exp. 346 Site U1425). *Bull. Geol. Surv. Japan*, vol. 70 (1/2), p. 195–209, 1 figure, 2 tables, 9 plates.

Abstract: In this study, we have illustrated the 84 species/species group of polycystine radiolarians, which were commonly encountered in the upper Miocene sediments at the Site U1425 of the Integrated Ocean Drilling Program (IODP) in the Japan Sea. The micro-photographs of these species/species group are illustrated in 9 plates.

Keywords: Integrated Ocean Drilling Program, late Miocene, Japan Sea, Polycystine radiolarians

1. Introduction

The Integrated Ocean Drilling Program (IODP) Expedition 346 retrieved seven sites covering a wide latitudinal and depth range in the Japan Sea and the East China Sea. The sediment cores collected in the Japan Sea cover the Holocene to the middle Miocene (e.g. Tada *et al.*, 2015; Kamikuri *et al.*, 2017). Polycystine radiolarians are Protista bearing skeletons of amorphous silica and they are the unique microfossil group, which can inhabit intermediate and deep-water (Suzuki and Not, 2015). They are also usually used as a biostratigraphic and paleoceanographical index in the North Pacific, where the preservation of carbonates is low in the deep-sea sediments. In the deep-sea sediment of the Japan Sea, the preservation of carbonates is lower than those recorded in the North Pacific because of a calcite compensation depth about 2,000 m (e.g. Ujiie and Ichikura, 1973), whereas radiolarians are usually well-preserved in such carbonate-poor sediments in the Japan Sea. Therefore, polycystine radiolarians were examined at all sites recovered in the Japan Sea during the expedition 346 to define their local biostratigraphy and establish a preliminary depth-age model at each drilled site (Kamikuri *et al.*, 2017). In this study, we propose to show micro-photographs of the radiolarian species and/or species group, which often occurred from the upper Miocene of IODP Exp. 346 Site U1425.

2. Material and methods

In this study, we have analyzed radiolarians from 88 sediment core samples covering the late Miocene collected from Sites U1425 drilled during IODP Expedition 346. The Site U1425 is located at 39°29.44'N and 134°26.55'E (Fig. 1), in the central Japan Sea, at the middle of the Yamato Bank, where the water depths is 1,909 m water depth. The 88 samples were freeze-dried, and treated with diluted hydrogen peroxide (H_2O_2) (15%) (50 ml of H_2O_2 at concentration of 30% diluted in 100 ml of water) and hydrochloric acid (15%) (40 ml of HCl at concentration of 35–37% diluted in 100 ml of water) to remove organic and calcareous matter. The undissolved residue in each sample was sieved over a 45-μm screen following the method proposed in Tada *et al.* (2015). The examination of polycystine radiolarians was carried out under an optical microscope Nikon Eclipse E 200 at magnifications of 100× to 400×. The photomicrographs were taken under an optical microscope at magnifications of 400× using a digital camera Olympus SP-600UZ, with an optical zoom of 5.0–75.0 mm, which is set on the used optical microscope.

3. Radiolarian fauna

Totally 84 species and species group, including 1 collodarian, 44 spumellarians and 39 nassellarians were encountered during the late Miocene in the Japan Sea.

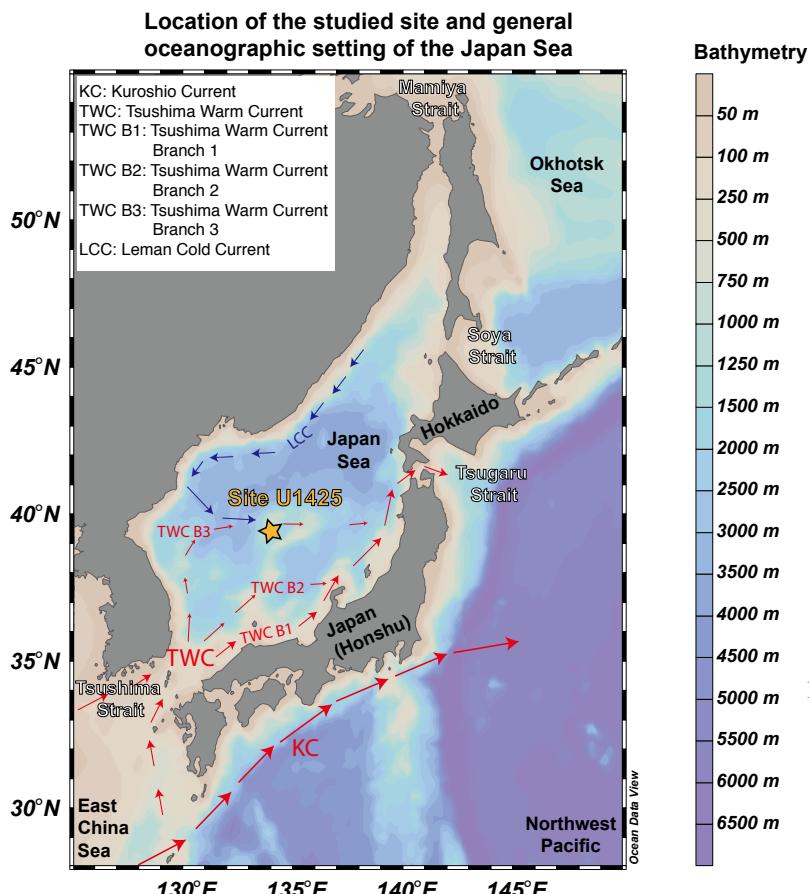

Fig. 1 This map has been modified from Matsuzaki *et al.* (2018) and shows the location of Integrated Ocean Drilling Program (IODP) Expedition 346 Site U1425 and the major paleoceanographic setting of the Japan Sea. The base map is from Ocean Data View 4 (Schlitzer, 2016).

Photomicrographs of all forms are shown from plate 1 to plate 9. For all these taxa, we have provided taxonomic names and its related taxonomic references (Tables 1 and 2).

Acknowledgement

We would like to thank Drs. Shin-ichi Kamikuri and Isao Motoyama for having reviewed our manuscript and providing us helpful suggestions. We also wish to thank Dr. Noritoshi Suzuki for providing us valuable taxonomic comments and remarks. We would like to thank the Integrated Ocean Drilling Program (IODP) Expedition 346 for provide us the samples. We also wish to thank the Kochi Core Center (KCC) and its curators for their sampling assistance. This work was supported by the JSPS Research Fellowship for Young Scientist grant 16J02142 (MKM). This work was also finally partially financed by the IODP Exp. 346 After Cruise Research Program, JAMSTEC.

<i>Lychnocanoma parallelopipes</i> Motoyama	9.2	Motoyama, 1996, p. 248, 250, pl. 5, figs. 12a-14

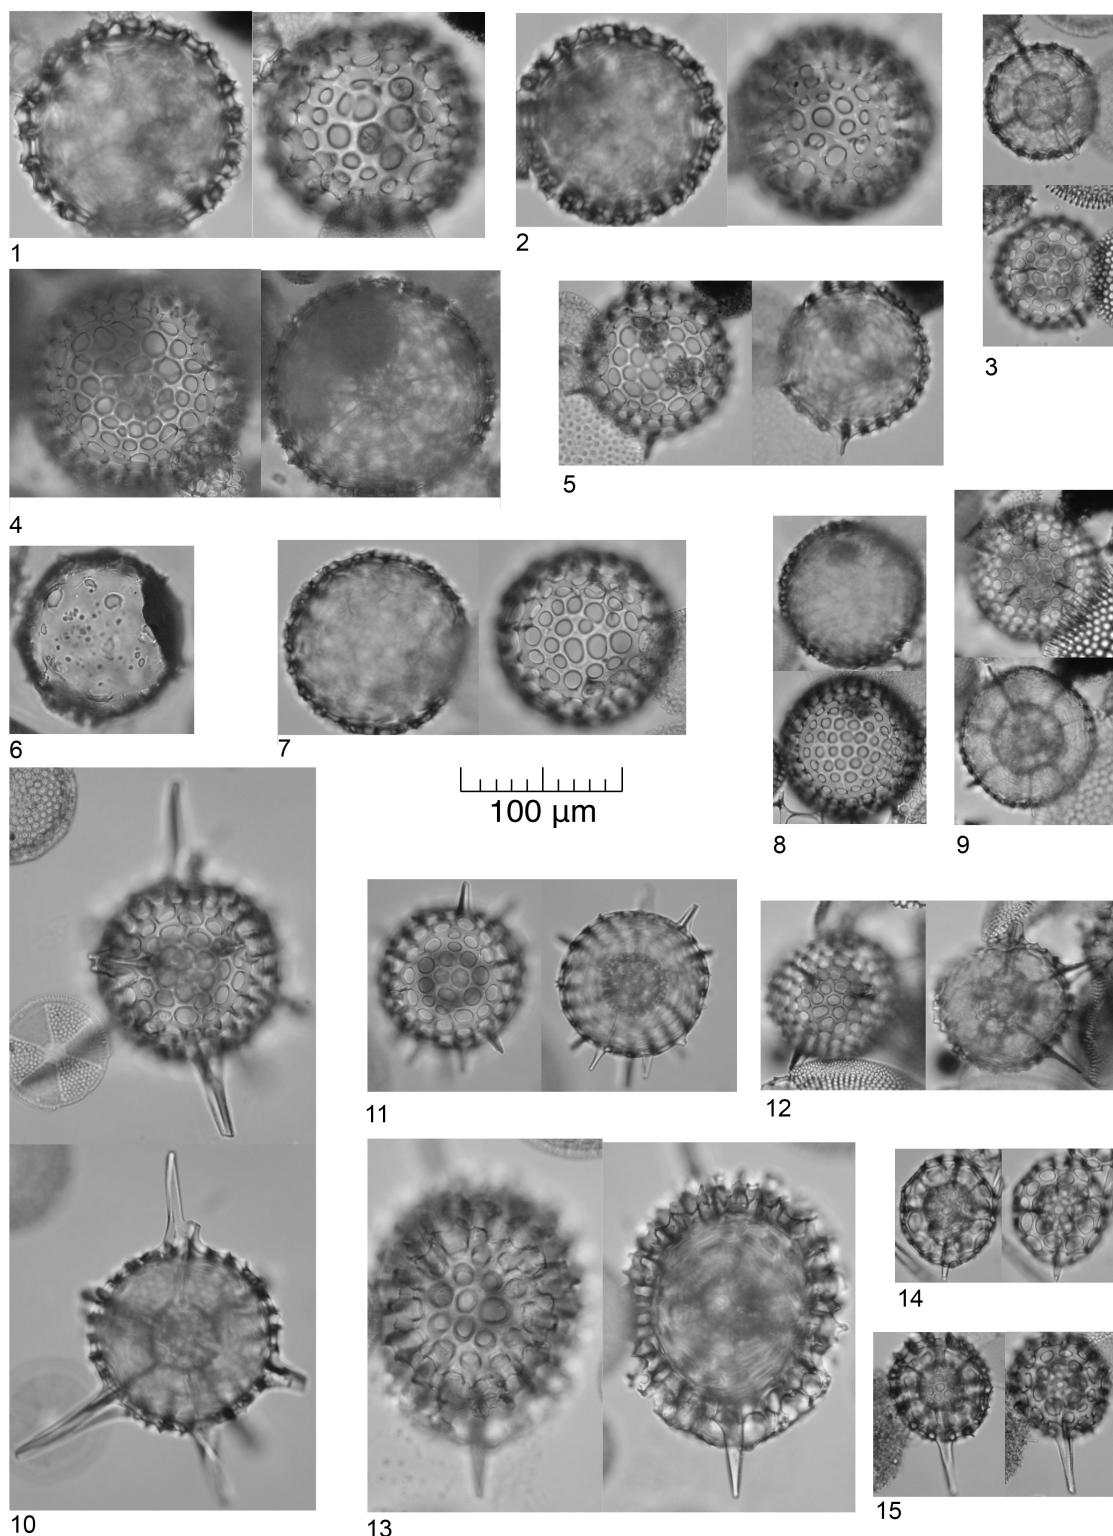

Plate 1 **1-2:** *Rhizosphaera* aff. *variabilium* (Nakaseko) (346-U1425B-34H4-46-48 cm); **3:** *Hexaconthium minerva* Kamikuri (346-U1425B-28H3-149-147 cm); **4:** *Rhizosphaera urumica* Vituchin (346-U1425B-CC-12-17 cm); **5:** *Hexastylus* spp. sensu Nigrini and Lombari (346-U1425B-34H4-46-48 cm); **6:** *Acrosphaera muse* Kamikuri (346-U1425B-CC-12-17 cm); **7:** *Rhizosphaera* sp. A (346-U1425B-34H4-46-48 cm); **8:** *Cenosphaera* cf. *compacta* Haeckel (346-U1425B-47H1-91-93 cm); **9,** **11:** *Actinomma robusta* (Kling) juvenile form (9: 346-U1425B-47H1-91-93 cm; 11: 346-U1425B-28H3-147-149 cm); **10,** **12:** *Actinomma* aff. *okurai* Nakaseko and Nishimura (10: 346-U1425B-34H4-46-48 cm; 12: 346-U1425B-47H1-91-93 cm); **13:** *Axoprunum bispiculum* (Popofsky) (346-U1425B-34H4-46-48 cm); **14:** *Druppatractus irregularis* Popofsky (346-U1425B-47H1-91-93 cm); **15:** *Stylosphaera pyriformis* (Bailey) (346-U1425B-47H1-91-93 cm).

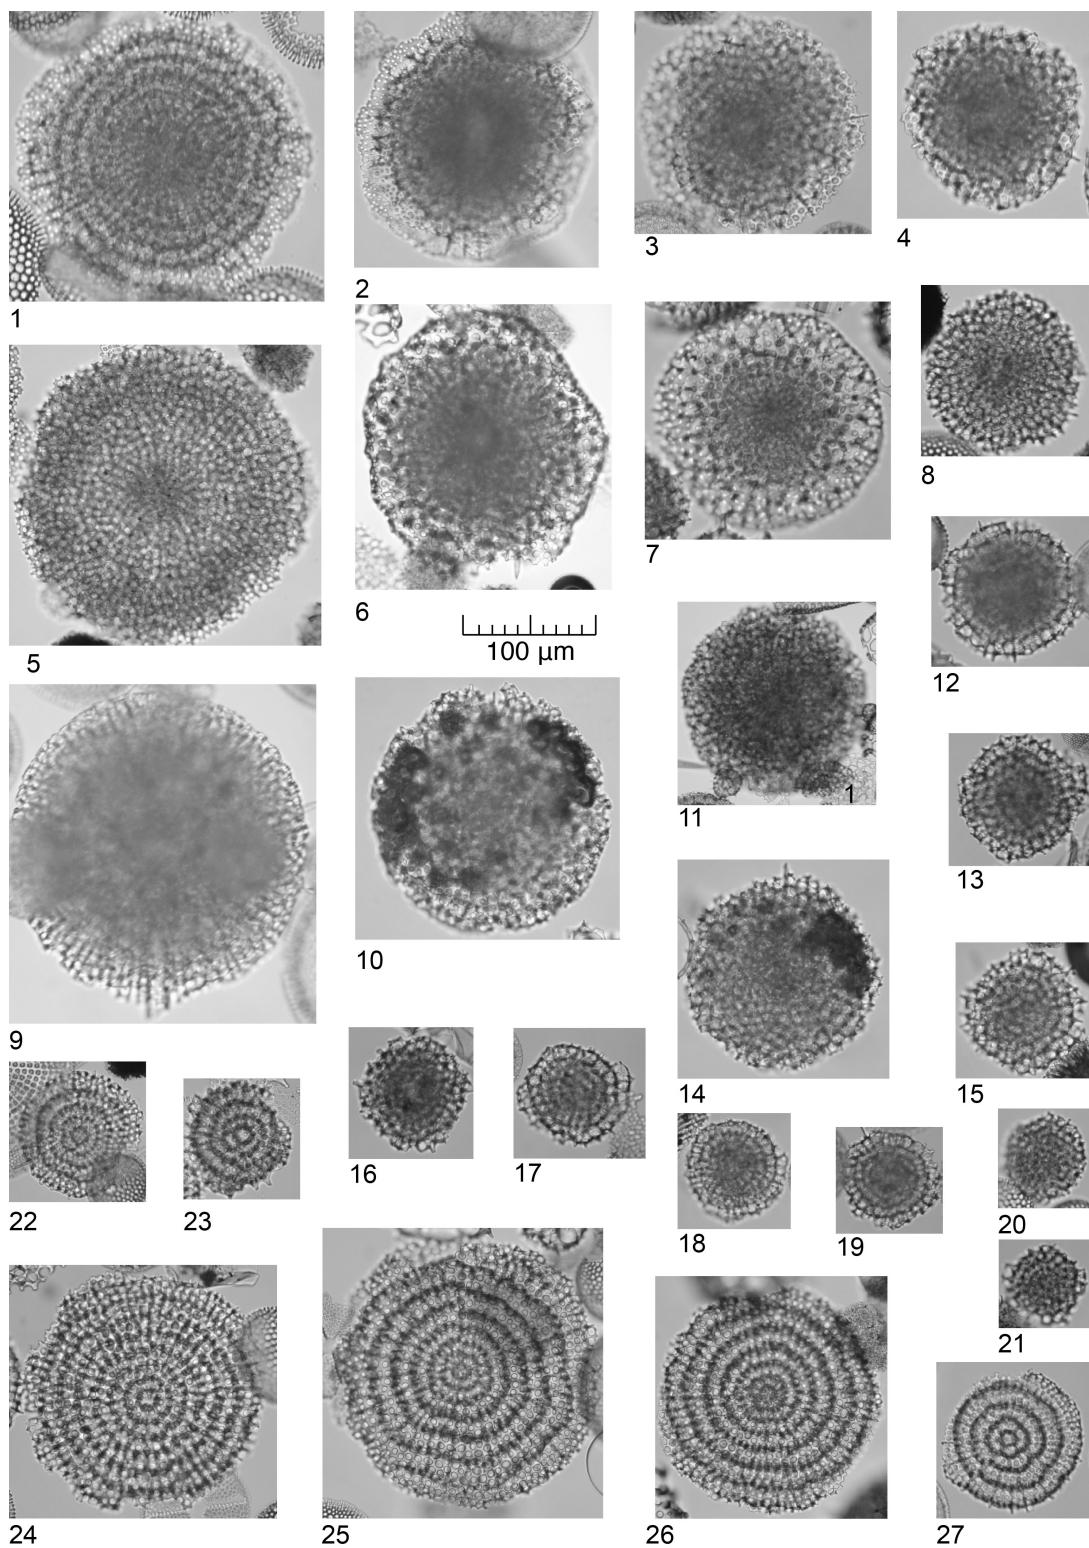

Plate 2 1: *Perichlamydia scutaeforme* Campbell and Clark (346-U1425B-28H3-147-149 cm); 2: *Perichlamydia* cf. *praetextum* (Ehrenberg) (346-U1425B-28H3-147-149 cm); 3-4: *Stylochlamydia* cf. *venustum* (Bailey) (346-U1425B-34H4-46-48 cm); 5: *Spongotrochus* sp. A (346-U1425B-47H1-91-93 cm); 6-7: *Spongodiscus cauletti* group Kamikuri (6: 346-U1425B-47H1-91-93 cm; 7: 346-U1425B-34H4-46-48 cm); 8, 12-13, 15-19: *Flustrella* sp. A (8: 346-U1425B-47H1-91-93 cm; 12, 15-18: 346-U1425B-34H4-46-48 cm); 9: *Spongopyle osculosa* Dreyer (346-U1425B-28H3-147-149 cm); 10-11: *Flustrella* spp. (young forms) (10: 346-U1425B-28H3-147-149 cm; 11: 346-U1425B-47H1-91-93 cm); 14: *Spongodiscus* sp. A (14: 346-U1425B-34H4-46-48 cm); 20-21: *Spongodiscidae juveniles* spp. (346-U1425B-47H1-91-93 cm); 22-27: *Stylodictya tenuispina* Jørgensen group (23-24: 346-U1425B-34H4-46-48 cm; 22, 25-27: 346-U1425B-47H1-91-93 cm).

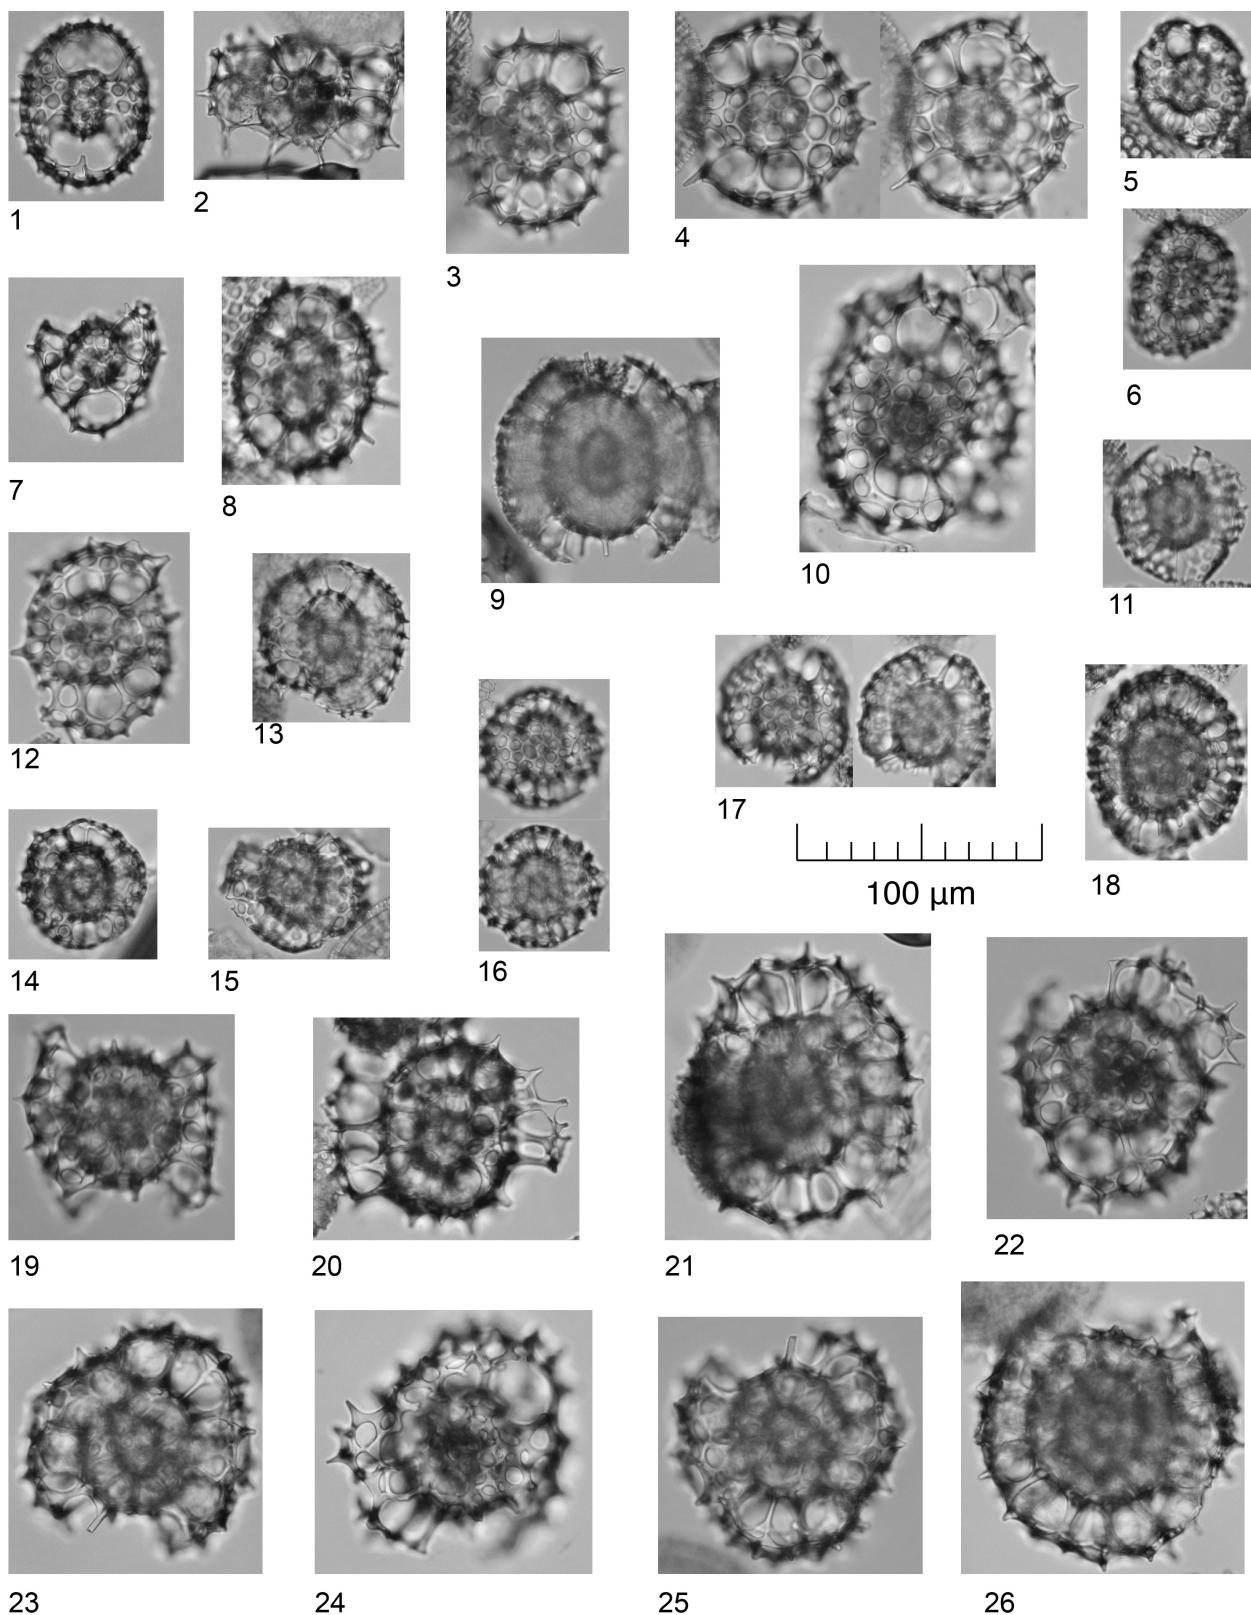

Plate 3 1: *Tetrapyle* cf. *circularis* Haeckel (346-U1425B-34H4-46-48 cm); 2: *Tetrapyle* cf. *fruticosa* (Tan and Chen) (346-U1425B-34H4-46-48 cm); 3-4, 8: *Phorticium* cf. *polycladum* Tan and Tchang (3, 8. 346-U1425B-34H4-46-48 cm; 4. 346-U1425B-28H3-147-149 cm); 5-6, 11, 14-18: *Prunulum coccymelia* Haeckel group (5,18. 346-U1425B-34H4-46-48 cm; 6,16,17. 346-U1425B-47H1-91-93 cm; 11. 346-U1425B-28H3-147-149 cm; 14. 346-U1425B-47H1-91-93 cm; 15. 346-U1425B-28H3-147-149 cm); 7: *Phorticium* sp. A (346-U1425B-34H4-46-48 cm); 9-10, 12-13: *Phorticium* aff. *scitulum* Zhang and Suzuki (9,10,12. 346-U1425B-34H4-46-48 cm; 13. 346-U1425B-47H1-91-93 cm); 19-26: *Sphaerolarnacillium* sp. A (346-U1425B-34H4-46-48 cm).

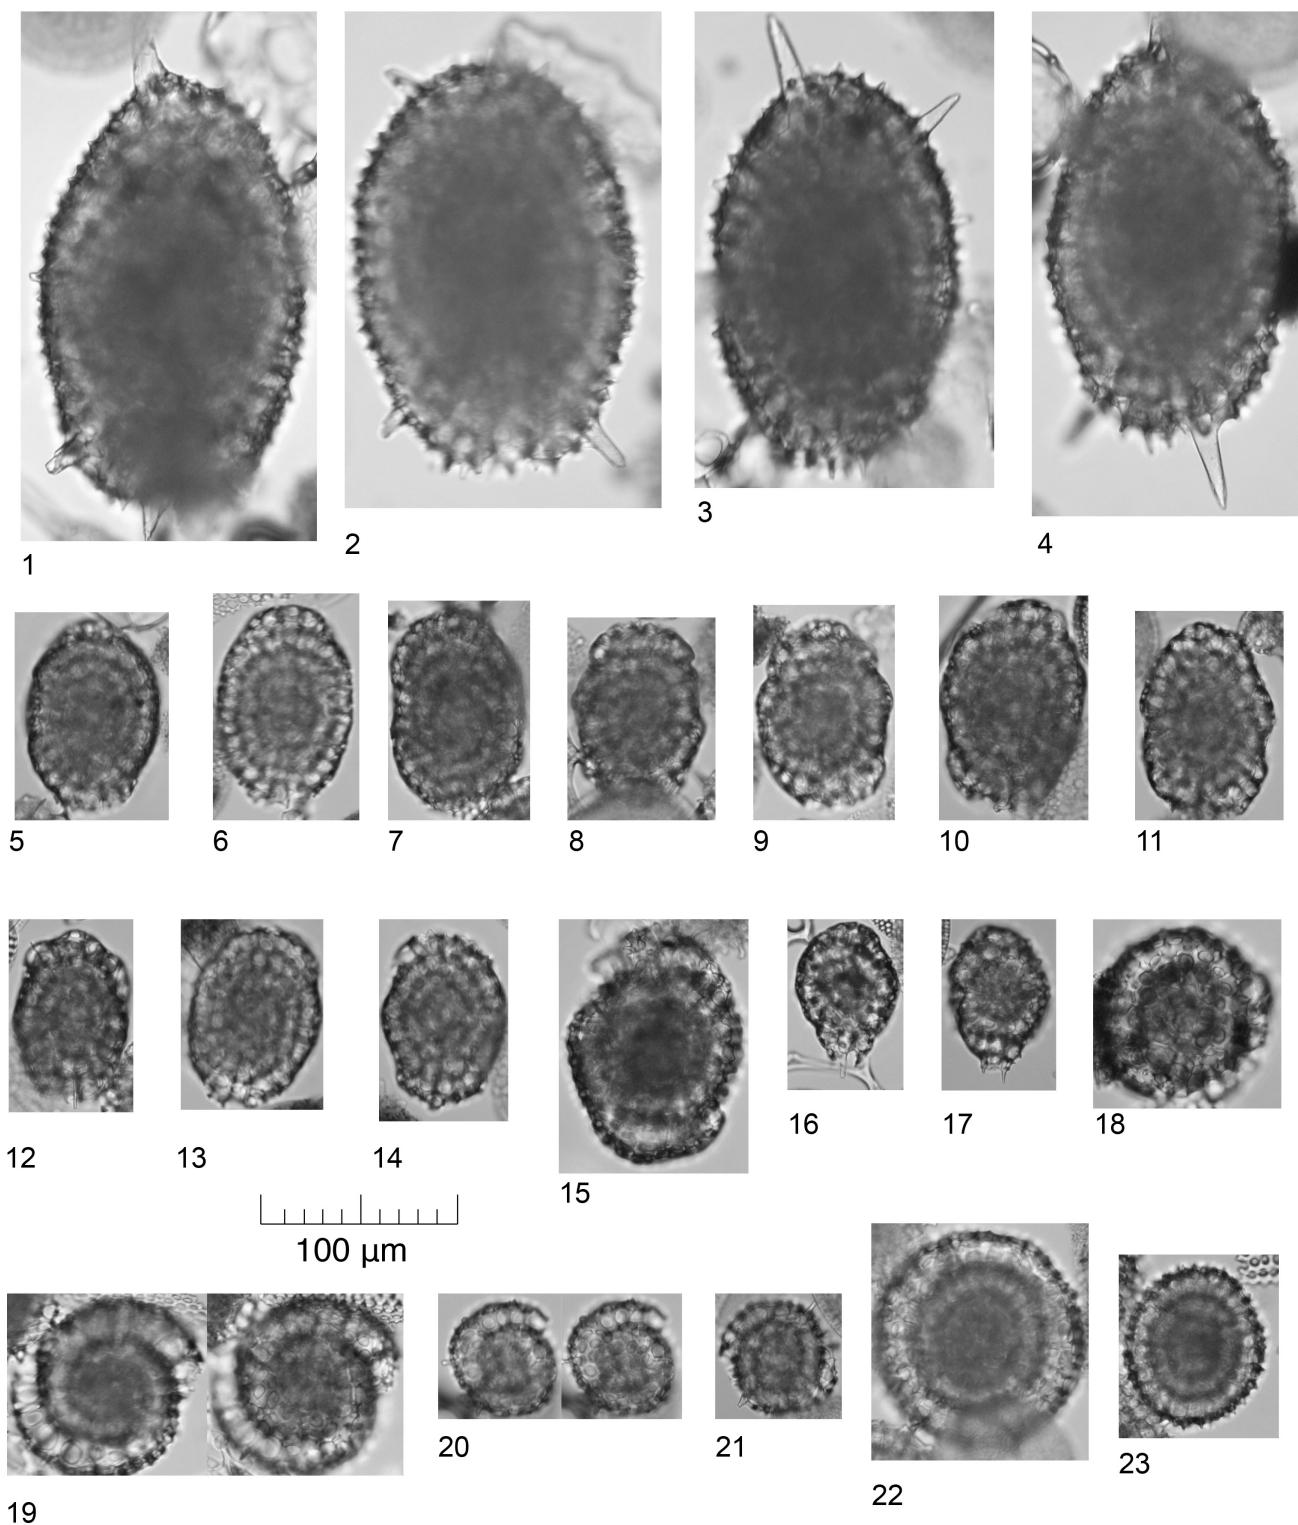

Plate 4 1-4: *Larcopyle* aff. *polyacantha* (Campbell and Clark) (346-U1425B-47H1-91-93 cm); 5-14: *Larcopyle* *weddellium* Lazarus, Faust and Popova-Goll group (346-U1425B-47H1-91-93 cm); 15: *Larcopyle* sp. A (346-U1425B-34H4-46-48 cm); 16-17: *Larcopyle* *labyrinthusa* Lazarus, Faust and Popova-Goll (16. 346-U1425B-34H4-46-48 cm; 17. 346-U1425B-47H1-91-93 cm); 18: *Larcopyle* sp. B (346-U1425B-34H4-46-48 cm); 19: *Lithelius* sp. A (346-U1425B-34H4-46-48 cm); 20: *Lithelius* cf. *nautiloides* (Popofsky) (346-U1425B-47H1-91-93 cm); 21: *Lithelius* sp. B (346-U1425B-47H1-91-93 cm); 22-23: *Lithelius* sp. C (346-U1425B-34H4-46-48 cm).

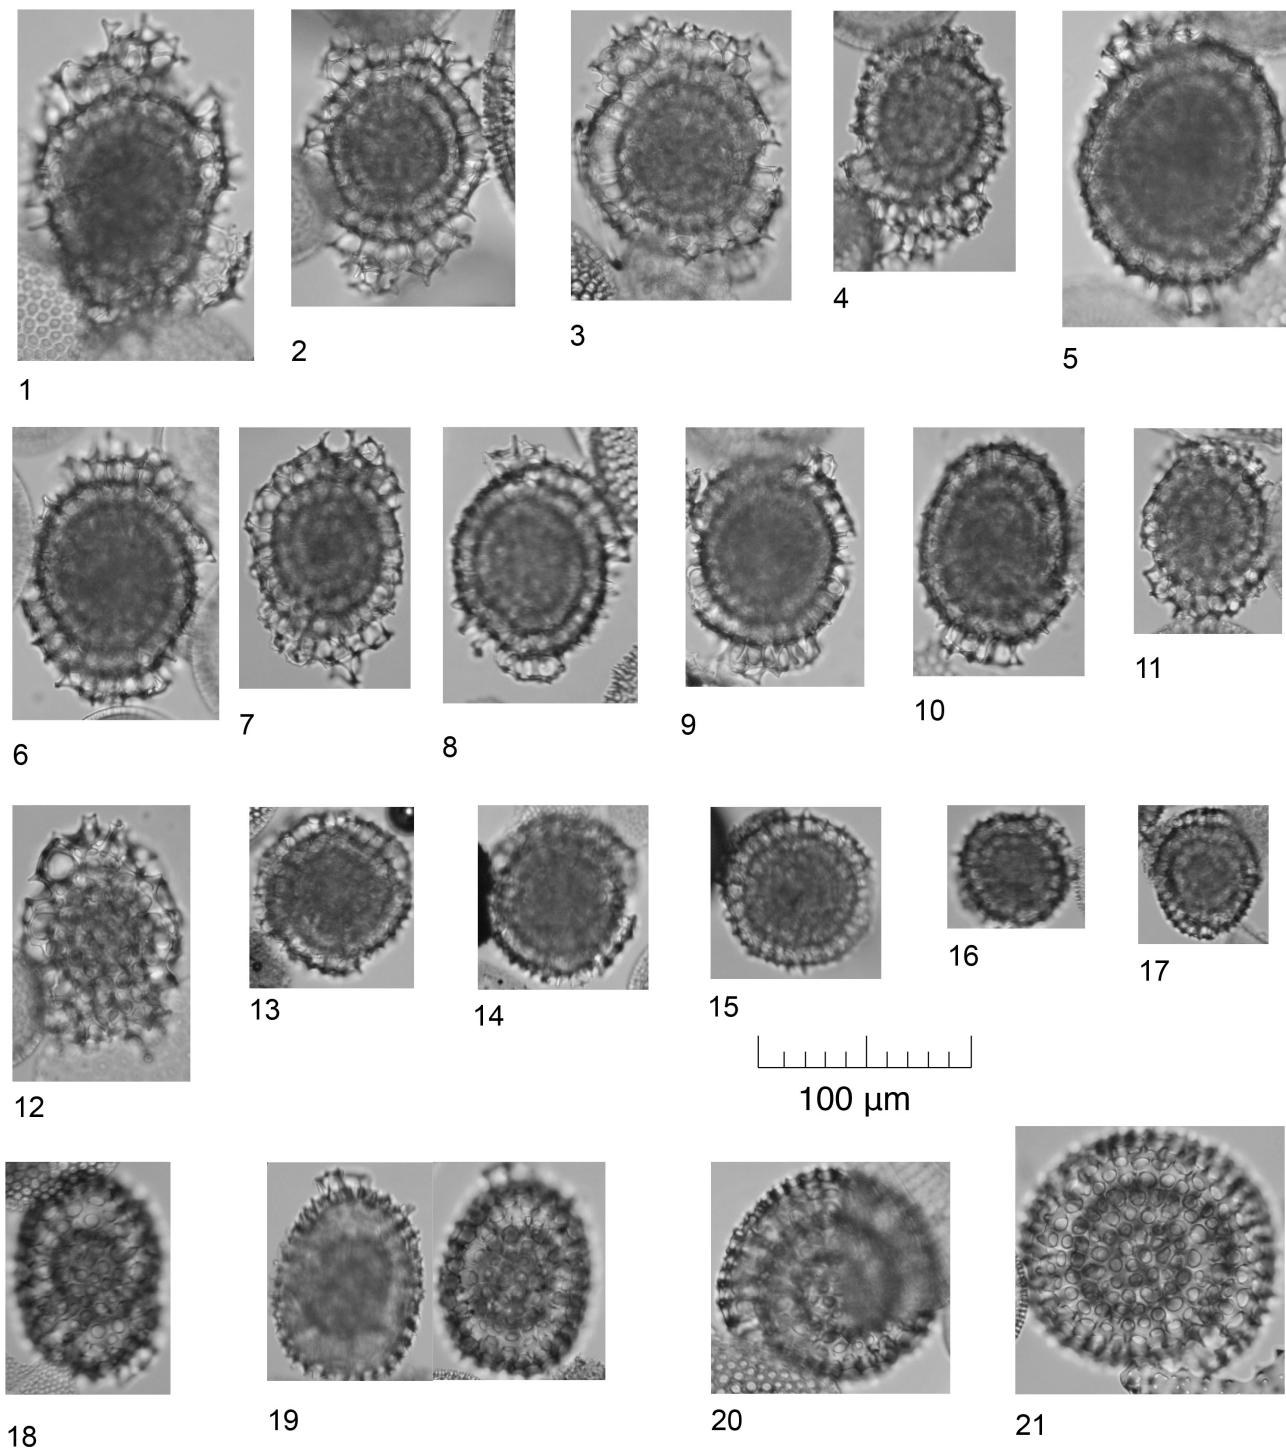

Plate 5 1-4, 7: *Lihelius barbatus* Motoyama (346-U1425B-28H3-147-149 cm). 5-6, 7, 8-11: *Spiremaria* cf. *decens* Kozlova (346-U1425B-28H3-147-149 cm). 12, 16-17: *Lithelidae* gen et sp. indet (12. 346-U1425B-28H3-147-149 cm; 16-17. 346-U1425B-47H1-91-93 cm); 13-15: *Lithelius* aff. *spiralis* group (Ehrenberg) (13, 14. 346-U1425B-47H1-91-93 cm; 15. 346-U1425B-34H4-46-48 cm); 18-19: *Phacodiscus* aff. *calvertense* (Martin) (346-U1425B-47H1-91-93 cm); 20-21: *Lithelius* *klingi* Kamikuri (346-U1425B-47H1-91-93 cm).

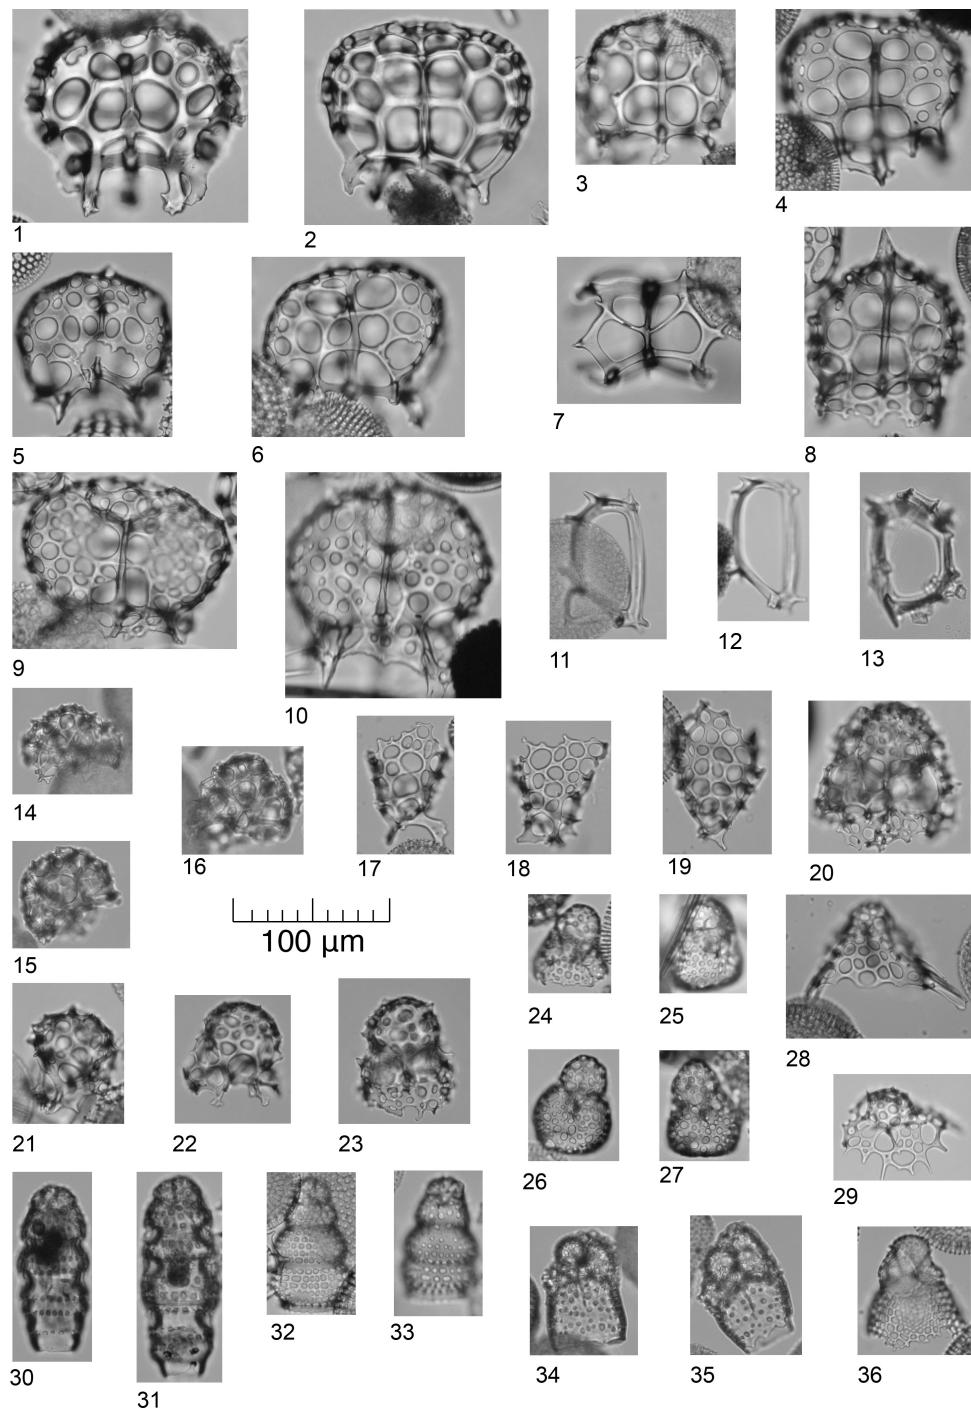

Plate 6 1: *Dendrosyris* sp. A (346-U1425B-34H4-46-48 cm); 2-3: *Dendrosyris* sp. B (2. 346-U1425B-34H4-46-48 cm; 3. 346-U1425B-47H1-91-93 cm); 4, 6: *Dendrosyris* sp. C (346-U1425B-47H1-91-93 cm); 5: *Dendrosyris* sp. D (346-U1425B-47H1-91-93 cm); 7: Undet. *Triospyridae* (346-U1425B-34H4-46-48 cm); 8: *Dendrosyris* sp. E (346-U1425B-47H1-91-93 cm); 9-10: *Dendrosyris* cf. *eurus* Kamikuri (346-U1425B-47H1-91-93 cm); 11-12: *Zygocircus archicircus* Popofsky (11-12. 346-U1425B-34H4-46-48 cm); 13: *Zygocircus?* sp. A (346-U1425B-34H4-46-48 cm); 14-16: *Steganocubus* sp. A (346-U1425B-30HCC-12-17 cm; 13. 346-U1425D-29H1-45-47 cm); 17-19: *Peridium sphaerum* Funakawa (346-U1425B-28H3-147-149 cm); 20: *Steganocubus?* sp. (346-U1425B-28H3-147-149 cm); 21-22: *Cryptogyrus* aff. *trachylobus* Sugiyama (21. 346-U1425B-47H1-91-93 cm; 22. 346-U1425B-34H4-46-48 cm); 23: *Lophophaenidae* gen. et sp. indet. (346-U1425B-34H4-46-48 cm); 24-27: *Botryopera?* *gibbera* Renaudie and Lazarus (346-U1425B-47H1-91-93 cm); 28: *Pseudodictyophimus* cf. *elegans* Dogiel and Reshetnyak (346-U1425B-28H3-147-149 cm); 29: *Pseudodictyophimus* sp. A (346-U1425B-34H4-46-48 cm); 30-31: *Siphocampe arachnea/lineata* (Ehrenberg) group (346-U1425B-34H4-46-48 cm); 32-33: *Botryostrobus bramlettei* Campbell and Clark group (346-U1425B-47H1-91-93 cm); 34-35: *Botryocampe* aff. *robusta* (Kruglikova) (346-U1425B-30HCC-12-17 cm); 36: *Botryopera?* *daleki* Renaudie and Lazarus (346-U1425B-28H3-147-149 cm).

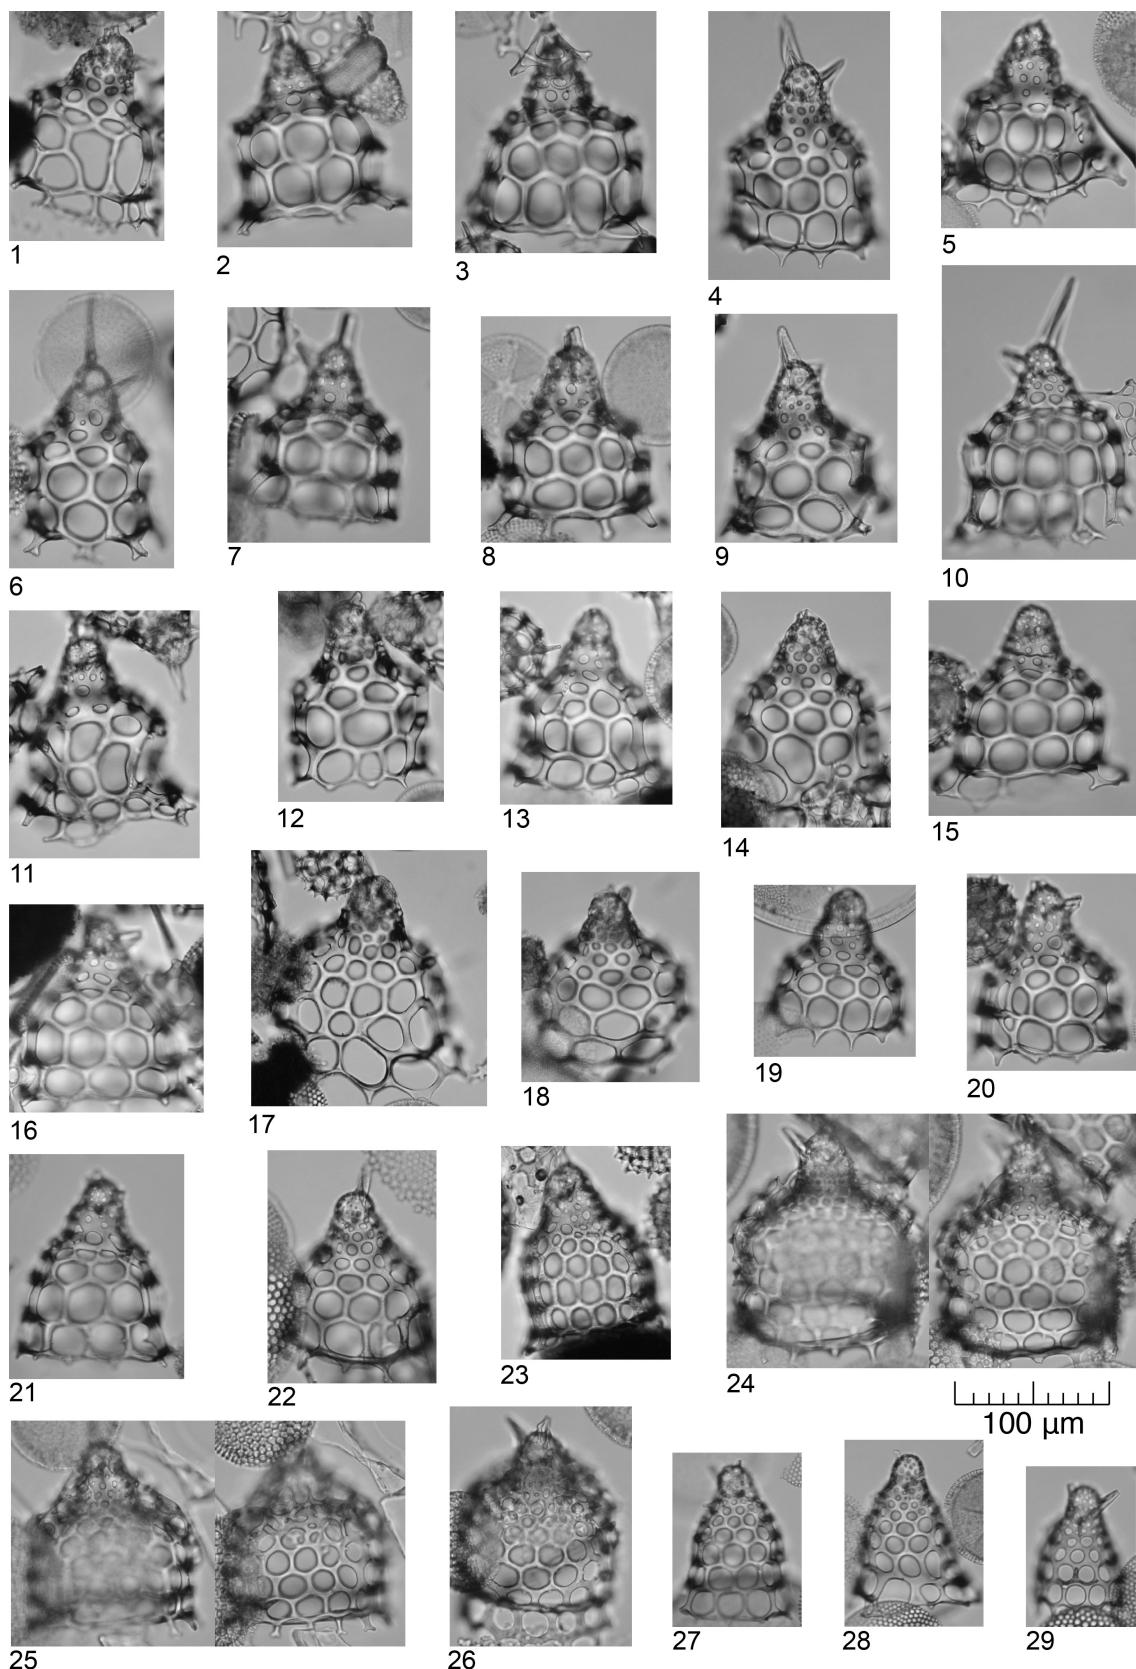

Plate 7 **1-14:** *Cycladophora nakasekoi* Motoyama (346-U1425B-47H1-91-93 cm); **15-22:** *Cycladophora* aff. *nakasekoi* Motoyama (346-U1425B-47H1-91-93 cm); **23:** *Cycladophora* cf. *sphaeris* (Popova) (346-U1425B-34H4-46-48 cm); **24-26:** *Cycladophora sphaeris* (Popova) (346-U1425B-28H3-147-149 cm); **27-28:** *Cycladophora cosma cosma* Lombari and Lazarus (346-U1425B-47H1-91-93 cm); **29:** *Cycladophora* aff. *cornuta* (Bailey) (346-U1425B-47H1-91-93 cm).

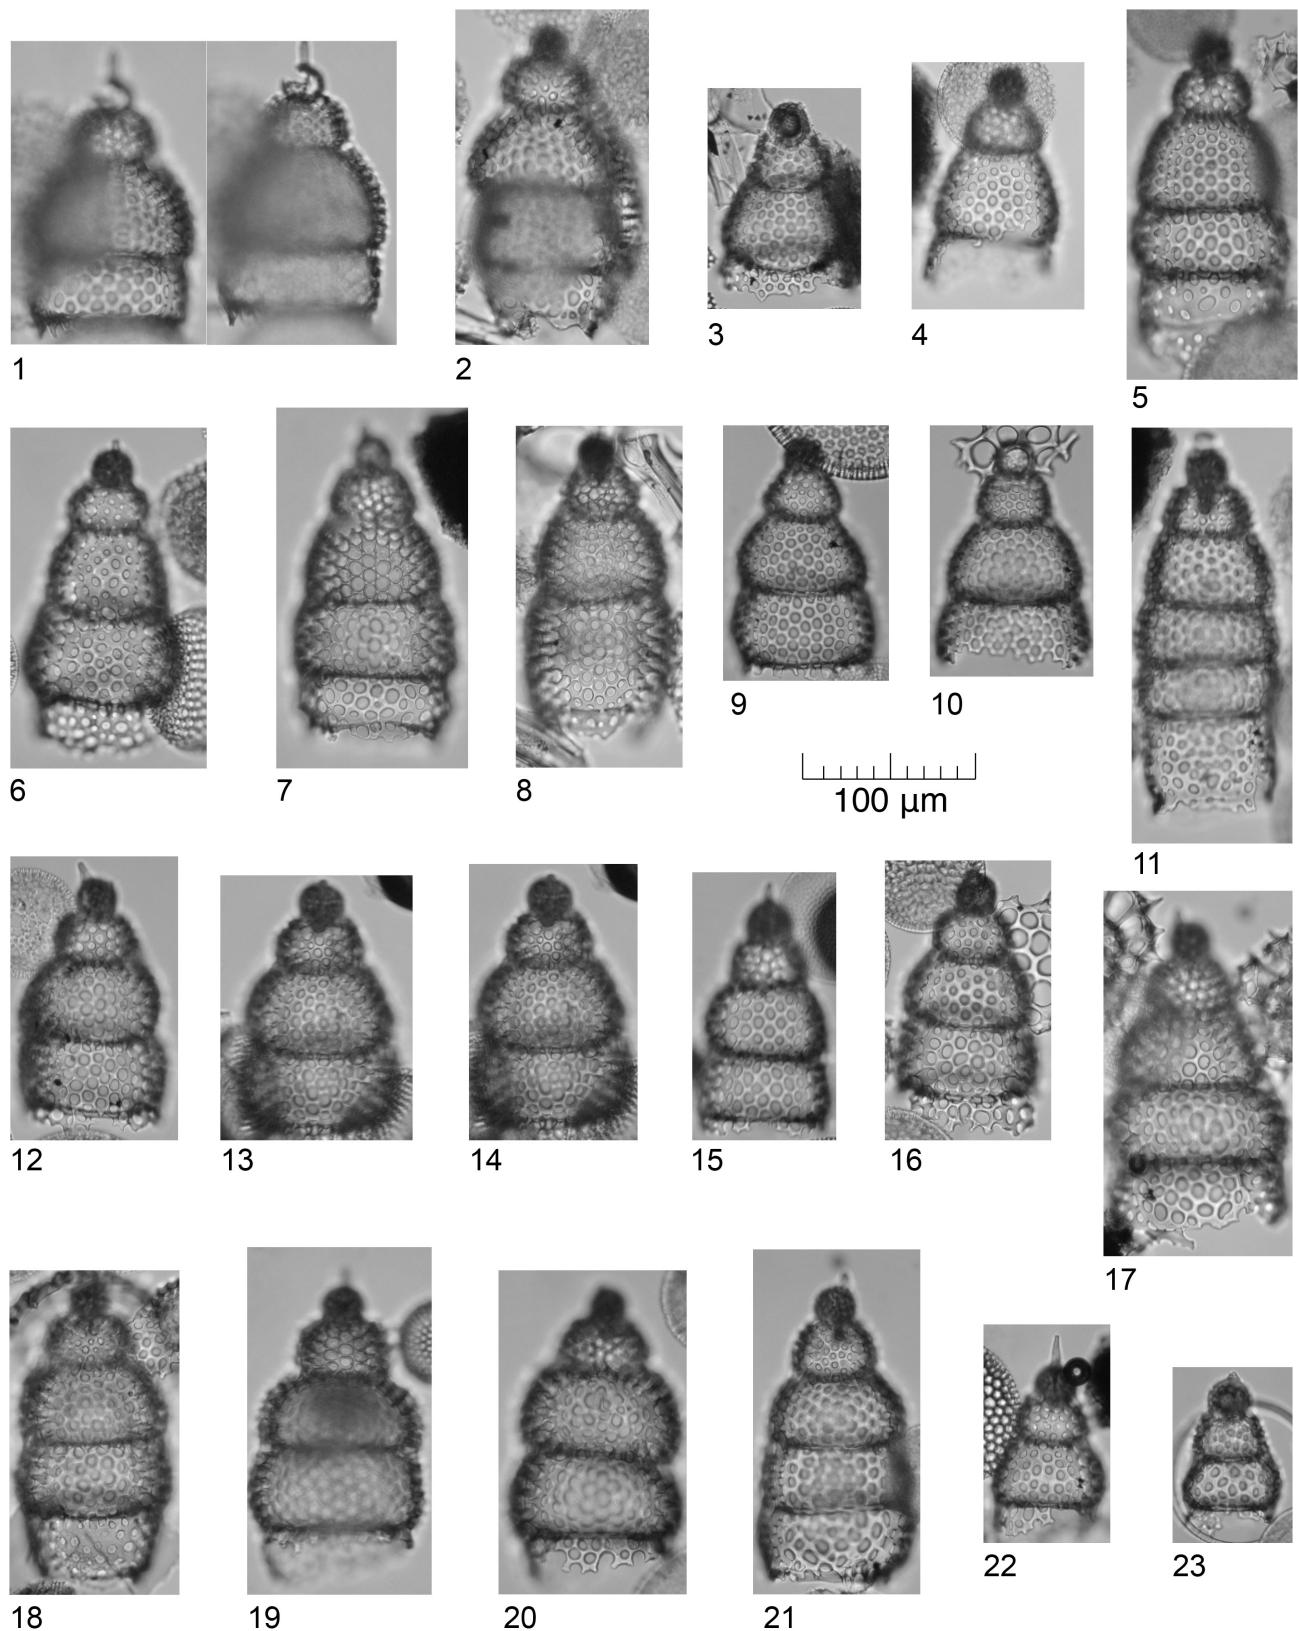

Plate 8 1: *Stichocorys delmontensis* (Campbell and Clark) (346-U1425B-34H4-46-48 cm); 2-8, 11: *Stichocorys peregrina* (Riedel) "equatorial form" (346-U1425B-34H4-46-48 cm); 9-10, 12-21: *Stichocorys peregrina* (Riedel) "North Pacific form"(); 22-23: *Stichocorys* sp. A (346-U1425B-34H4-46-48 cm).

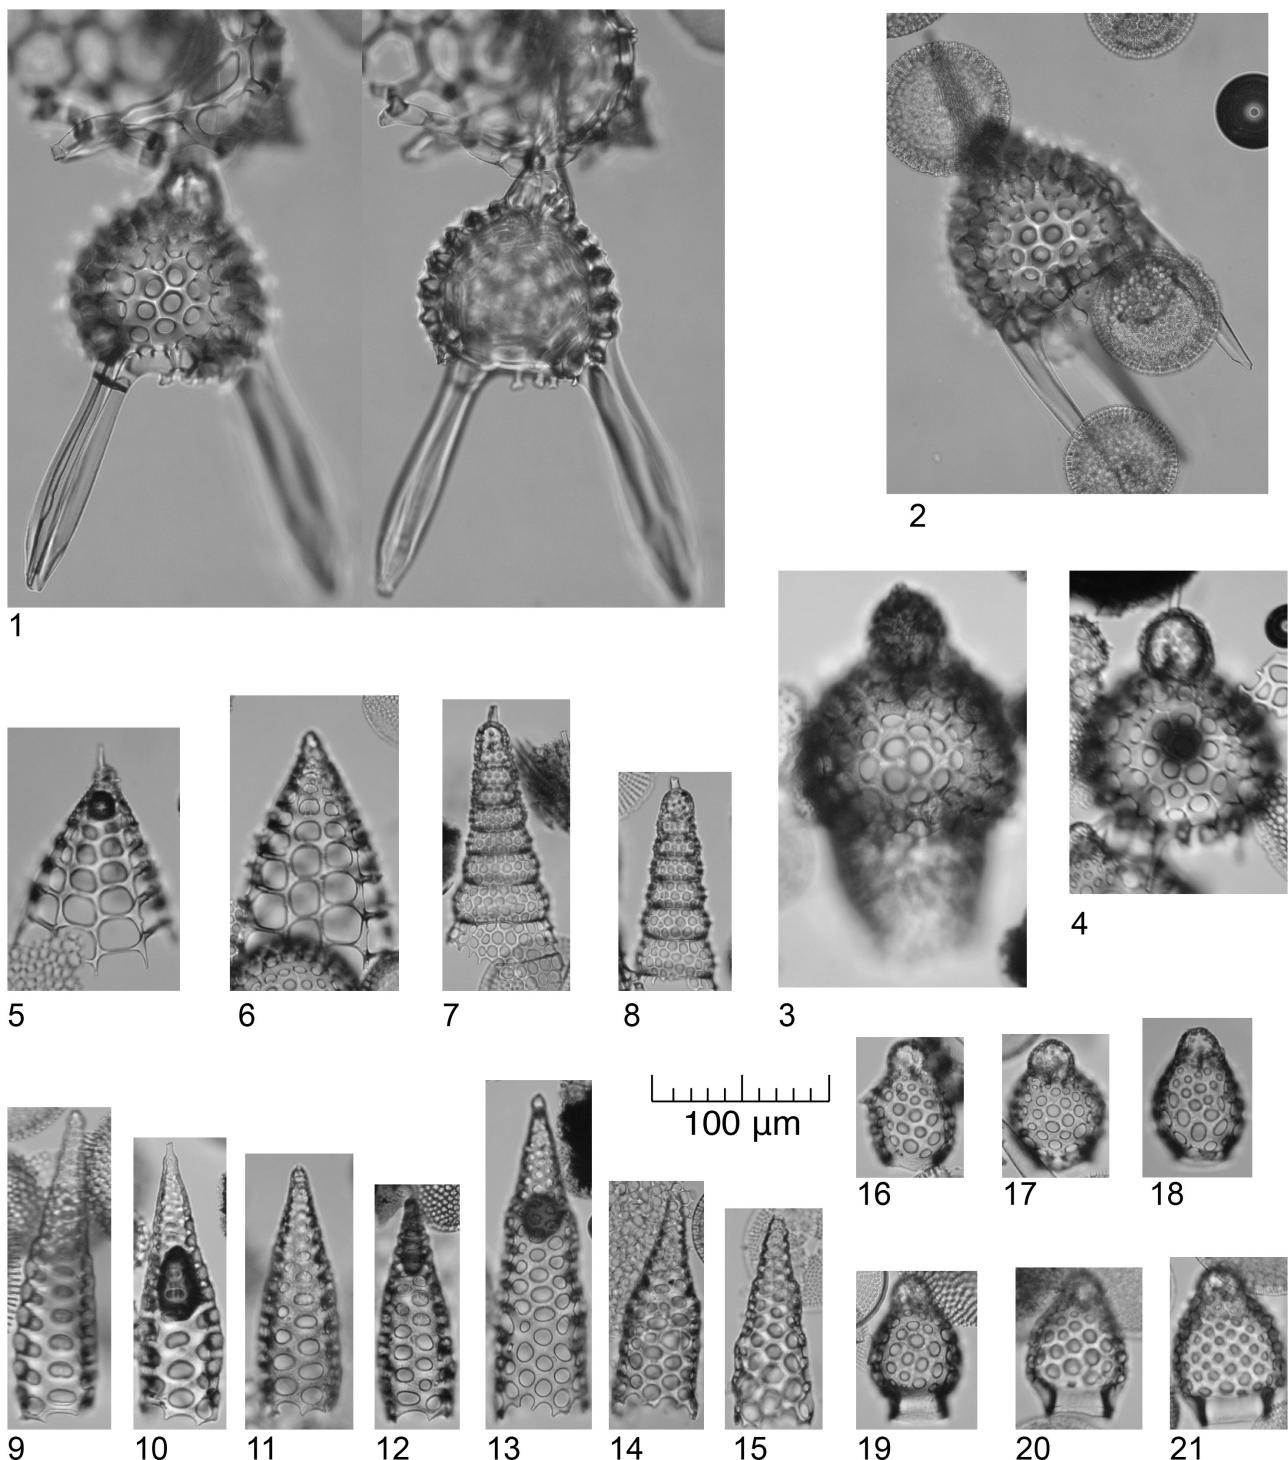

Plate 9 1: *Lychnocanoma magnacornuta* Sakai (346-U1425B-51HCC-24-29 cm); 2: *Lychnocanoma parallelopipes* Motoyama (346-U1425D-29H1-45-47 cm); 3-4: *Lipmanella redondoensis* (Campbell & Clark) (346-U1425B-47H1-91-93 cm); 5-6: *Cinclopyramis quadrata* (Haeckel) comb. nov. (346-U1425B-47H1-91-93 cm); 7-8: *Cyrtolagena cuspidata* (Bailey) (346-U1425B-47H1-91-93 cm); 9-12: *Cornutella bimarginatus* (Haeckel) (9. 346-U1425B-28H3-147-149 cm; 10-12. 346-U1425B-47H1-91-93 cm); 13-15: *Cornutella trochus* Ehrenberg (346-U1425B-47H1-91-93 cm); 16-21: *Carpocanarium papillosum* (Ehrenberg) group (346-U1425B-47H1-91-93 cm).
